

Reduce Noise Pollution and Create a More Peaceful Working Environment in Your Warehouse Operation.

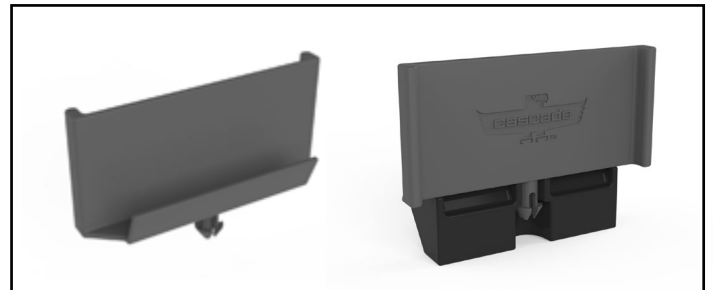

SOUND SHIELD™

Excessive noise can be irritating and can lead to undue stress for employees. Cascade Sound Shield™ helps alleviate this issue by diminishing redundant noise and allowing electric lift trucks and AGV's to move about peacefully.

How it works:

Cascade Sound Shield™ protection has a lower hanger designed to accept a nylon insert which locks in place and wraps securely around the sides of the fork shank. The insert contains a component which acts as a lubricant to minimise resistance allowing for easy movement on the carriage.

Sound Shield Benefits:

- Sound dampening inserts minimise fork chatter during unladen travel.
- Reduction of metal on metal contact helps reduce hook and carriage wear.
- Helps ensure a snug fit against the carriage while allowing easy movement.
- Perfect for use near properties where early morning or evening deliveries need minimal noise.

Initial Offerings:

- ISO/ITA Class II, 100mm (4") width forks.
- Additional offerings according to demand.

Cascade Sound Shield™ – the ideal finishing touch to electric internal warehouse trucks and AGV's.
